

Trident Technical College (TTC) is conducting market research to gather information for SaaS cloud-based Enterprise Resource Planning (ERP) systems.

TTC is a public, two-year, multicampus community college that provides quality education and promotes economic development in Berkeley, Charleston and Dorchester counties. TTC is the largest college in the SC Tech System and serves over 20,000 students annually through a complex matriculation cycle. These students have a wide variety of educational goals, applied technical associate degrees, diplomas, certificates, and university transfer associate degrees. Additionally, the college offers high school dual enrollment partnerships, apprenticeship programs, customized workforce training, and personal enrichment opportunities. To foster student success, the college provides multiple course delivery methods and comprehensive academic and student support services. Learn more at www.tridenttech.edu.

TTC's current on-premise systems create significant challenges in supporting the complex matriculation cycle — from prospect engagement, admissions, registration, financial aid, and course scheduling, through graduation and alumni relations. These processes are fragmented across multiple platforms, requiring duplicate data entry, manual intervention, and custom workarounds that slow service delivery and increase the risk of errors. A modern SaaS cloud-based ERP solution is needed to unify and streamline this end-to-end student lifecycle, providing students, faculty, and staff with a seamless, efficient experience. To ensure continuity of services, TTC seeks a solution that provides seamless integration during the cutover from legacy systems to modern cloud-based platforms.

The college seeks information on SaaS cloud-based ERP systems, authorized value add resellers, and associated implementation that can support a college of our size while providing state of the art technology, enhanced AI capabilities and data security to deliver exceptional student experience and streamlined operations.

If you wish to provide information regarding a SaaS cloud-based Enterprise Resource Planning (ERP) as a part of this market research, please contact:

Carol A. Belcher, C.P.M., Director of Procurement,
